Powerprozesse — hausverwalter.ai

Application: Backend / Fullstack Developer (AI)

Dear Hiring Team,

I am applying for the Backend / Fullstack Developer position at Powerprozesse. The vision behind hausverwalter.ai — replacing 5–10 daily tools with a single AI-first platform that lets property managers build, train and measure their own agents — is exactly the kind of complex, high-impact product I want to help build, and the technologies you work with map directly onto my experience.

Much of what you are building is what I already enjoy doing. I have built RAG and knowledge-base systems end to end — embeddings, semantic search and reranking with LangChain/LangGraph and vector storage — as well as LLM agents and automation workflows that replace repetitive, multi-tool processes. On the engineering side I work across the stack in TypeScript with Next.js, React and Tailwind, and I have shipped production systems with robust, queue-backed pipelines (Redis async tasks) and secure third-party API integrations designed to handle volume spikes gracefully.

In my most recent role I designed and shipped a full AI web application on my own initiative, owning architecture decisions across frontend, backend and infrastructure, and delivering 99.9% uptime while handling 500+ concurrent requests. I am comfortable contributing to stack direction and product vision, not just implementing tickets — and I already work in an AI-first setup powered by Claude and Cursor, with disciplined version control and collaboration on GitHub.

Beyond the technical fit, I am genuinely looking for the kind of role you describe: a long-term position at a structured, growing company where I can roll up my sleeves, take ownership, and grow alongside the team for the long haul rather than just enjoy the remote freedom. I communicate comfortably in English and am happy to work fully remotely while staying closely aligned with the team.

I would be glad to walk you through my projects and discuss how I can contribute to hausverwalter.ai as it approaches launch. Thank you for considering my application.

Kind regards,

Ossama Elhakki
