Renew Capital

Application: AI Intern — Casablanca, Morocco

Dear Hiring Team,

I am excited to apply for the AI Intern position at Renew Capital. The idea of helping a pan-African investment firm put emerging AI tools to practical use — improving internal workflows, research and data analysis across operations, investment analysis and ecosystem development — is exactly the kind of work I want to do, and it aligns closely with both my skills and my curiosity.

I recently completed a Master's in Distributed Systems & AI and have spent the past year building practical, AI-powered solutions. I am fluent with leading AI assistants such as Gemini and ChatGPT, and comfortable with prompt engineering, LLM agents and no/low-code automation tools (n8n, Apify, APIs). I have built knowledge-management and document-summarization systems using RAG, and designed automated workflows that replace repetitive, multi-tool tasks — the same kind of productivity gains you are looking to bring to your teams.

Just as important as building tools is helping people use them. In my last role I owned projects end to end — researching options, prototyping solutions, and writing clear documentation and delivery specs so others could adopt the work confidently. I also build interactive platforms that turn complex AI concepts into accessible explanations, which reflects how much I enjoy enablement, documentation and training — a core part of this role.

I am curious, highly organized, and genuinely energized by experimenting with new technologies independently, while collaborating well across cross-functional teams. I communicate clearly in English, both written and verbal, and I am based in Casablanca and available to contribute right away.

I would welcome the opportunity to discuss how I can help Renew Capital research, prototype and operationalize AI tools that make your teams more productive. Thank you for considering my application.

Kind regards,

Ossama Elhakki
